PREPARED FOR

gardyn®

Chief Experience Officer

This document is based upon information supplied by the client, supplemented by interviews with key individuals and representatives of the company's management. The material has been reviewed with the client and expresses a common view of the business, the role specification and candidate profile.

THE COMPANY

About Gardyn

Better for You. Better for the Planet.

Gardyn believes it is urgent to rediscover what food should be about: fresh, tasty, nutritious, easily accessible, and grown in a sustainable manner, every day. At Gardyn, they are reimagining the future of food for the better, for everyone. Three technological breakthroughs are guiding our revolution. First, thanks to the increasing quality of affordable LED lights, we can provide plants with the perfect light they need all day in any type of location. Second, the latest hybriponic innovations developed by Gardyn along with researchers at McGill University allow us to grow plants vertically without soil, and hence totally change the scale and volume at which we can grow produce. Third, machine vision and artificial intelligence make it possible to have the best "gardener" tending our crops 24 hours a day. At Gardyn, we are pushing these innovations to the next level. We are making it possible for everyone to enjoy indoor vertical gardens that take care of themselves and provide for large quantities of amazingly tasty and nutritious produce. Large quantities of food grow all year round on a very small footprint (2 square feet), and hassle free! Crazy busy modern lives can ring with health, nature, and harmony.

Kelby - The AI Gardener Behind Every Gardyn

A Simple Idea with a Powerful Ambition

Growing food should feel natural, joyful, and deeply human. Yet for many people, it still feels complex, intimidating, and uncertain.

Kelby exists to change that.

Kelby is Gardyn's AI-powered personal gardener - not a feature, but the *soul* of the Gardyn experience. Kelby makes growing food effortless and reliable, while transforming the experience into something emotional, exciting, and deeply meaningful.

At its core, Kelby is about one thing: turning your gardyn into a positive force in your life.

Why Kelby Matters

Kelby is a Gaelic name meaning "fountain of life."

A fountain of life gives continuously - quietly, reliably, and generously. That is what Kelby does for every Gardyner: it sustains growth, removes uncertainty, and creates abundance without demanding expertise or constant attention. Kelby represents a new relationship between people, technology, and nature, one where technology fades into the background and life takes center stage.

Who Kelby Is

Kelby is not a chatbot. It is not a static rules engine. It is not a generic AI assistant. Kelby is a living system - a continuously learning intelligence that understands your gardyn, observes it daily, anticipates its needs, and quietly guides it toward success.

But Kelby goes beyond making things work.

Kelby is your best buddy, always on your side, always running the extra mile. It cares not only about your plants, but about how the experience feels: joy, pride, confidence, and satisfaction.

The Experience Kelby Creates

Kelby is designed around one holistic experience, built on three deeply human pillars:

Drive Success - Effortless and Reliable

- Kelby ensures that *every* Gardyner succeeds, regardless of experience. Healthy plants, visible progress, and real harvests - without stress, guesswork, or fear of failure.

Love - Pride, Joy, and Emotional Connection

- Drive Kelby is what makes the experience feel great. It reassures, celebrates milestones, and creates moments of delight that build confidence and pride.

Tribe - Belonging to Something Bigge

- Kelby turns individual success into collective meaning. It empowers Gardyners to spread the word naturally, through pride, identity, and authentic enthusiasm.

How Kelby Works (In Simple Terms)

Kelby combines AI, computer vision, sensors, and collective learning across thousands of Gardyn systems. It builds a digital twin of your gardyn and continuously learns to prevent issues and elevate the experience.

More Than Growing Food - A Lifestyle Game Changer

Kelby turns growing food into a lifestyle upgrade: helping you live healthier, feel proud of what you grow, reinforce positive habits, and belong to a tribe that shares your values.

In One Sentence

Kelby is the AI-powered fountain of life that turns growing food into a true lifestyle game-changer, helping you live healthier, feel proud of what you grow, and belong to a tribe that shares your values.

The Role

TITLE: Chief Experience Officer

LOCATION: Remote, U.S.

Reporting to: Chief Executive Officer

The Chief Experience Officer will be responsible for shaping, managing, and evolving the end-to-end Kelby experience to drive customer success, engagement, retention, and brand loyalty across the Gardyn ecosystem. The role combines strategic journey design with hands-on execution, leveraging behavioral psychology, AI-triggered support, and personalized guidance to help users achieve early success and long-term habit formation. The CxO will lead initiatives that strengthen emotional connection to Kelby, reduce churn, extend device lifespan, and foster a strong sense of community and advocacy among Gardyn users.

KEY RESPONSIBILITIES

- Transform the entire Kelby journey to boost early success and reduce early churn
- Focus on end-to-end journey redesign using AI triggers and personalized support to ensure every Gardyner is set up for success.
- Revamp the full Kelby onboarding and early journey to incorporate relevant guidance and proactive detection/correction of Gardyner mistakes.
- Increase overall new Gardyner success rate (as defined by achieving a stable, thriving garden within the first X weeks including succession planting) by a measurable percentage.
- Reduce early-stage (within the first 6 months) churn by at least half by leveraging detection and early intervention to correct issues before they lead to drop-off.
- Create and define a strong Kelby character and personality in the app, making it a reliable, trusted gardening companion that Gardyners look forward to interacting with regularly.
- Leverage Kelby's personality to deliver fun facts, tips, and personalized recommendations (like plant care, mindfulness, recipes) that make the Gardyner feel supported and enhance the overall experience.
- Use Kelby's emotional connection to reinforce habit loops, turning Gardyn use into a deeply ingrained routine that keeps Gardyners engaged longer and makes the experience feel like a natural part of their lifestyle.
- Use AI detection to identify early signals that highlight the root causes behind churn in progress (the "churn stories"). Proactively address these root causes to prevent them from developing into full churn events.
- Combat engagement fatigue by continuously providing new value, inspiration, and milestone celebrations that keep Gardyners engaged over the long term and make the experience consistently rewarding.
- Launch targeted re-engagement campaigns specifically for Gardyners who have paused

usage, addressing their hurdles, reigniting their motivation, and making it easy and appealing for them to restart their Gardyn journey.

- Foster a sense of belonging by showcasing each Gardyner's impact on their community and the environment, reinforcing the bigger mission.
- Provide auto-generated, shareable content that makes it easy and fun for Gardyners to share their achievements.
- Celebrate "tribe moments" through the app to encourage community pride and natural sharing of Gardyn experiences and achievements.

The Candidate

Major Professional Experiences, Education & Competencies

- Lifecycle & Engagement Product Leadership.
- Behavioral Psychology & Habit-Loop Design.
- Analytical Fluency & Experimentation.
- UX/Product Craft & Cross-Channel Journey Design.

Required Skills and Competencies:

- High Emotional Intelligence & Customer Empathy
- Strategic Clarity + Systems Thinking
- Collaborative Leadership & Influence
- Mission-Driven, Resourceful, and Resilient
